

Social Media Marketing Department | Recommended Tool Stack

This sets out the recommended tools for the Social Media Marketing Department's content lifecycle for scheduling, DM and lead automation, video repurposing, CRM and internal workflow — along with two additions that close out the remaining pieces of the team's workflow.

Recommended Stack

Area	Recommended Tool	What It Covers
Scheduling & Publishing	Zoho Social (3 seats, ~₹1,800/month)	Multi-platform scheduling and publishing. Configured so a post only goes live after final approval — automation sits downstream of the existing sign-off step, never around it.
DM & Comment Automation	SuperProfile	Comment-to-DM automation and keyword-triggered responses for lead capture. Anything outside the defined keywords — including anything that reads as a complaint or escalation — is routed to a team member for a manual reply rather than handled automatically.
Video Repurposing	ChatCut / Submagic / Eddie AI (one-month trial)	Converts long-form video into short-form clips with captions. All three will be trialled for a month; final choice confirmed based on output quality and fit with the team's footage.
Lead Management	Meritto (CRM)	Leads captured via SuperProfile are logged into Meritto, assigned to the right department, and followed up automatically — completing the lead flow end to end.
Internal Workflow & Reporting	Content Ops Tracker + Zoho Projects	Content calendar, task assignment, approval gates and deadline reminders run through the Content Ops Tracker; Zoho Projects covers cross-department tracking. A connector tool (Zapier/Make) ties both to Zoho Social and Meritto for automatic hand-offs.

Already Built by BuildableLabs

Two pieces of the team's day-to-day workflow aren't covered by the stack above and are proposed as small additions rather than new subscriptions:

- **Interdepartment content requests:** a dedicated Content Requests page with an intake form (department, requester, required date, priority, request details). Submissions become trackable tickets with New, Accepted, or Scheduled status.
- **Content-mix reporting:** every content item carries a category (Knowledge / Promotional / AAFM India Insider). The Reports page calculates the live mix and checks it against the 60/20/20 target — a live dashboard rather than a scheduled report, which is arguably a better answer than what the brief asked for (it only asked that the ratio "be visible in the automation dashboard").

Questions for the Team

1. Which two team members, alongside Priya, should get the Zoho Social scheduling seats?
 2. What's the full list of DM keywords needed across programs (CWM, ChE, NISM tracks, etc.)? This determines the right SuperProfile plan tier.
 3. Should the new Meritto license be scoped to lead-entry access only, or does the content team need broader CRM access?
 4. When will the production Supabase project be provisioned, so Content Requests and Content-Mix Reporting move off demonstration data onto live data?
-
